Twenty-four muscle groups, controlled by the various motor and sensory nerve pathways,

$\frac{2}{2} \infty$

The adductor pollicis is the second last red band muscle in the hand

1. Power grasp (The adductor pollicis stabilizes an object against the palm; the hand's position is static.)
 - cylindrical grip (first grasp is a small diameter cylindrical grasp)
 - spherical grip
 - hook grip (MP extended with flattening of transverse arch; the person may or may include the thumb in this grasp)
 - lateral prehension (this can be a power grip if the thumb is adducted, a precision grip if the thumb is abducted).
2. Precision
